Professional Summary

Software Developer Intern with hands-on experience working on PMS/ERP software across multiple modules, including feature development, workflow improvements, debugging, manual testing, report validation, customer issue resolution, source-control check-ins, and application publishing. Building a career toward DevOps and Cloud Engineering with practical exposure to AWS CloudTrail, CloudWatch, cloud security monitoring, CI/CD concepts, Git/GitHub, and cybersecurity. Pursuing an MCA in Cyber Security with a project focused on AI-assisted threat hunting in cloud ERP environments.

Technical Skills

Cloud & DevOps: AWS, CloudTrail, CloudWatch, IAM, EC2, S3, Git, GitHub, CI/CD Concepts, Cloud Monitoring, Log Analysis, PowerShell

Software Development: C#, ASP.NET, Windows Forms, HTML, CSS, JavaScript, Node.js, Express.js, REST APIs

Databases: SQL, MongoDB

Cyber Security: Threat Detection, Security Monitoring, Log Analysis, Authentication, Cloud Security Concepts

Tools: Visual Studio Code, Visual Studio/Team Explorer, TFS, Git, GitHub, PowerShell, Excel

Professional Experience

Software Developer Intern

PMS/ERP Software Development

Ongoing

India

- Contribute to development and maintenance of PMS/ERP software across multiple business modules, with responsibilities expanding across modules based on assigned requirements.
- Implemented and improved application workflows based on business and customer requirements, including functionality related to sales and lifting processes.
- Worked on floating-button functionality and compact Windows Forms interfaces to display relevant contextual data during application workflows.
- Worked on workflow enhancements involving WhatsApp messaging, post-lifting communication, link-based printing, and required output generation.
- Investigated and resolved customer-reported application issues through debugging, functional verification, and corrective changes before testing and release.
- Performed manual testing across multiple PMS/ERP modules and prepared testing reports to document functional verification and identified issues.
- Resolved report and Excel-export issues involving editable data, headers, date formatting, and incorrect interpretation of numeric values as dates.
- Used source-control workflows involving code comparison, pending-change review, meaningful check-in messages, TFS/Team Explorer check-ins, application publishing, and server-side testing handover.
- Worked from daily tasks assigned through Google Sheets and submitted end-of-day work reports documenting completed activities.

Selected Projects

Cloud Security Monitoring and Threat Detection on AWS

AWS CloudTrail, CloudWatch, SNS, IAM

- Designed a cloud security monitoring workflow using AWS CloudTrail and CloudWatch for collecting and analyzing security-relevant activity.
- Worked with monitoring and alerting concepts for suspicious activities such as unauthorized API activity, console login failures, IAM changes, and security-related configuration changes.
- Explored automated notification workflows using AWS monitoring and alerting services.

Secure AWS Cloud Infrastructure with Bastion Host

AWS, VPC, EC2, IAM, Security Groups

- Designed a secure AWS network architecture using VPC, public and private subnets, route tables, Internet Gateway, security groups, and EC2 instances.
- Implemented a bastion-host approach for controlled administrative access to resources located in a private network segment.

Secure CI/CD DevSecOps Pipeline

GitHub, CI/CD, Security

- Developed a project demonstrating secure CI/CD practices and the integration of security considerations into an automated software delivery workflow.
- Used version-control and pipeline concepts to structure repeatable build, validation, and delivery activities.

AWS Highly Available Web Architecture

AWS, EC2, Load Balancing, Networking

- Designed a highly available AWS web architecture using distributed application resources and cloud networking concepts.
- Focused on availability, network segmentation, scalability concepts, and secure infrastructure configuration.

Academic Project

Autonomous Cyber Defense System using AI for Real-Time Threat Hunting in Cloud ERP (Prototype) MCA
Cyber Security

- Designed a prototype architecture for AI-assisted threat hunting in cloud ERP environments using authorized audit telemetry and contextual security signals.
- Defined an event-processing workflow covering normalization, contextual feature engineering, anomaly-oriented prioritization, and analyst review.
- Documented illustrative scenarios involving privileged actions, denied-request bursts, and novel source context, with human analyst review retained in the decision loop.
- Defined scenario-based prototype verification covering valid events, missing fields, rare privileged actions, denied-request frequency signals, and analyst dispositions.

Education

Master of Computer Applications (MCA) – Cyber Security
Jain University, Bengaluru

Expected 2026

Bachelor of Computer Applications (BCA)
Veer Kunwar Singh University, Bihar

2018

Training

DevOps / Cloud Training: Linux, AWS, Git, GitHub, SQL, CI/CD concepts, DevOps practices, cloud fundamentals, monitoring, and related software delivery concepts.

Additional Strengths

-
- Hands-on exposure to the software lifecycle from development and debugging through testing, source-control check-in, publishing, deployment, and testing handover.
 - Strong problem-solving mindset with experience investigating application issues and implementing requirement-driven fixes.
 - Cyber Security specialization with practical project exposure to cloud monitoring, threat detection, and security-focused system design.
